11. Awards & Recognitions :

Awards

- 1 Indian Service of Engineering Award 2002
- 2 Khosla Research Prize and Medal 2002

Recognition

- 3 *First prize winner for Young Scientist Poster Presentation in the 6th Annual Conference of the International Society for Integrated Disaster Risk Management (IDRiM 2015), entitled "Disaster Risk Reduction: Challenges and Opportunities for Sustainable Growth" conducted by Technology Information, Forecasting and Assessment Council (TIFAC) during October 28-30, 2015 at the Scope Convention Centre, New Delhi. The prize was given for the research work entitled "Seismic Performance Evaluation of Innovative Interlinked Concrete Block Masonry System with Energy Dissipator Visco-Elastic Links" by Amit Goyal and Pankaj Agarwal. The conference was supported by several national and international organizations including, the Disaster Prevention Research Institute (DPRI), Japan and the International Institute for Applied Systems Analysis (IIASA), Austria.*
4. *The work on Energy Absorbing Block Masonry Inter-Linked with Visco-Elastic Link Elements has been selected by the IIT Roorkee on the recommendation of technical committee constituted in IIT Mumbai to present a product development in Make In India Program of Govt. of India during Feb. 11-18, 2015 Mumbai.*
5. *Direct Telecast at Prime time of NDTV Channel, New Delhi*
A feature on Interlinked Block Masonry building with visco-elastic link element on the tests of model buildings was broadcast by NDTV India on 19 May 2015 on Prime Time.
6. **Publication in Technical Magazine & General Articles**
 1. *An Earthquake Resistant Design with Used Surface Reporter (International Rubber Tyres Magazine, Page 99) August 2015*
 2. *Building Technology: Interlocked Block Masonry Master Builder(Page 112-115) August 2015 System*
 3. *Seismic Performance Evaluation of Innovative Interlocked Block Masonry System Hindustan Times (1st June, June 2015; (Page 11, Delhi edition)*

12. Any Other Relevant Information :

INNOVATION THROUGH TEACHING: A distance education course on earthquake engineering for the practicing design Engineers and Architects was conducted in 2003 in a new format known as **DEIW** under four synchronized modes, (1) **Distance learning:** The course material was sent to the participants in four modules (2) **Electronic learning:** The participants raise queries or seek clarifications through e-mail; (3) **Interactive learning:** Every participant may visit DEQ to interact personally with the concerned faculty and (4) **Workshop learning:** A two days workshop was held comprising of panel discussions, group discussions and special invitee lectures. This course was very well responded, accepted and appreciated by the participants.

EDUCATIONAL DEVELOPMENT: Written a book on *Earthquake Resistant Design of Structures* published by Prentice-Hall of India, New Delhi, 2006. Fifteen reprints till September 2016 and approximately 1,00,000 copies already sold. It is referred as text book in Govt. and Pvt. engineering colleges in India including IITs & NITs.

13. **Statement of significant academic contributions with Special Emphasis on the Last Five Years < 500 words>**

INNOVATIVE RESEARCH DEVELOPMENT: Developed a new construction technique for ER housing based on interlocking of pre-cast slotted concrete blocks with the help of visco-elastic energy dissipation links, prepared by recycling pieces of rubber tyres. The developed low-cost system is very effective in withstanding strong earthquake motions without any distress. *A feature on Interlinked Block Masonry building with visco-elatic link element on the tests of model buildings was broadcast by NDTV India on 19 May 2015 on Prime Time and can be seen at <https://www.youtube.com/watch?v=hn8Fz-ZyIeQ>.*

INFRASTRUCTURE DEVELOPMENT: Developed a new integrated large scale Pseudo-Dynamic/Cyclic Test Facility with total overlay of Rs 11.00 Crore. The facility is very useful for the calibrations/ verification and updating the numerical modeling of new/innovative concepts. It consists of (a) Servo-Hydraulic System (Actuators (2 @ $\pm 500\text{kN}/250\text{mm}$ 2 @ $\pm 250\text{kN}/500\text{mm}$, Hydraulic Power Unit (400 l/min at 210 bar), Digital Compact Eight Channel Controller, Software with other related items) (b) Strong Floor (12 m x 10m), Reaction Wall (2 Nos of 9m x 9m) and Reaction Frame (6m x 9m with 100 tonne capacity under any combination of loads i.e. axial, flexure shear and torsion (iii) with the 25 tonne overhead crane facility. ***Recently, a test is conducted successfully on full scale one storey reinforced concrete frame with visco-elastic energy dissipating infill panel. The frame is tested upto its failure with the help of three actuators - two in vertical position to apply the constant vertical loads and one in horizontal direction to apply the horizontal load in cyclic condition with increasing amplitude displacement at low frequency.***
